TIMOTHY N. KOIGI

JUNIOR FULL-STACK SOFTWARE DEVELOPER

Nairobi, Kenya | 0757706943 | timothykoigi@gmail.com
LinkedIn | GitHub | Portfolio: add your website URL

PROFESSIONAL SUMMARY

Junior Full-Stack Software Developer with practical experience building web applications, integrating front-end interfaces with back-end services, working with database migrations and application validation, and regularly testing application functionality. Experienced with Git and GitHub workflows, including branches, commits, pull requests, and merges. Has deployed a full-stack application and is focused on building secure, maintainable, user-friendly software while continuing to deepen skills in API design, database integrity, automated testing, and production operations.

TECHNICAL SKILLS

Front-End Development: HTML5, CSS3, JavaScript, React, responsive design, user interface development
Back-End Development: PHP, Laravel, Python, Flask, REST API integration, request/response handling, application validation
Databases: MySQL, PostgreSQL, SQLite, database migrations, relational data, database integration
Testing and Debugging: Functional testing, workflow verification, debugging, input validation, Pytest where applicable
Version Control: Git, GitHub, branches, commits, pull requests, merges, repository management
Development Tools: Ubuntu/Linux, npm, Composer, Postman, JSON
Deployment: Full-stack application deployment, configuration, troubleshooting, post-deployment functional checks

PROJECTS

Hospital Management System | Python, OOP, JSON, bcrypt, Pytest, Git/GitHub
Repository: github.com/timothykoigi/hospital-management-system

- Developed a Python command-line application organized around Patient, Doctor, Admin, and Appointment models.
- Applied object-oriented programming principles to structure application functionality.
- Implemented JSON-based data persistence and input validation.
- Used bcrypt password hashing to improve credential security.
- Used Pytest to test application functionality and identify potential issues.
- Managed source code and project changes using Git and GitHub.

ShopSizzle — E-commerce Website | React, JavaScript; include back-end/database technologies only where completed
Repository: github.com/timothykoigi/ShopSizzle-frontend

- Developed a client-focused e-commerce website for Anord Wakaba in Kabiria, emphasizing a clean, user-friendly interface.
- Used React and JavaScript to develop and organize front-end components.
- Focused on usability, responsive layouts, and maintainable project structure.
- Worked on connecting front-end functionality with back-end services and database-backed features where implemented.
- Tested application workflows and troubleshot development issues.

The Grand Reserve — Restaurant Website | React, JavaScript; Laravel/PHP and MySQL as applicable
Repository: github.com/timothykoigi/grand-reserve-restaurant-frontend

- Developed a restaurant website concept focused on menu browsing and a clear customer ordering experience.
- Organized the front-end codebase to support maintainability and continued back-end integration.
- Worked toward connecting the website to a Laravel back end and relational database.
- List ordering, payment, delivery, or deployment features only if implemented and verifiable.

PROFESSIONAL EXPERIENCE

Freelance Web Developer — ShopSizzle Client Project | Kabiria, Kenya
Client: Anord Wakaba | Dates: add actual start/end dates

- Translated client requirements into a practical e-commerce website interface and organized project structure.
- Developed front-end functionality using React and JavaScript, focusing on usability and maintainability.
- Tested features, investigated issues, and made improvements during development.
- Used Git and GitHub to track changes and manage the codebase.

EDUCATION

Strathmore University — Certificate in Full Stack Web and App Development | December 2025

Moringa School — Certificate of Completion | Expected December 2026; confirm programme and status

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

Microsoft Azure Fundamentals (AZ-900): confirm status; list as certified only after passing the exam.

Continuing professional development in REST API development, relational database design, automated testing, Git/GitHub collaboration, and application deployment.

CURRENT DEVELOPMENT PRIORITIES

- Build and document REST APIs with authentication, authorization, server-side validation, and consistent error handling.
- Improve relational database design using foreign keys, constraints, transactions, indexes, and migration/rollback workflows.
- Expand automated unit and integration test coverage, including negative cases and authorization checks.
- Strengthen production deployment with environment variables, HTTPS, logging, backups, and continuous integration.
- Continue collaborative Git workflows with reviewed pull requests, merge-conflict resolution, and clear project documentation.
